

Efficiency for the Construction Industry

Building Construction 

 **ProTeam**[®]

Are you eliminating dust, dirt & debris or just pushing it around?

Building a home or business produces a vast quantity of drywall dust and dirt particles. Dust can settle and travel throughout a building, making cleaning difficult and being hazardous to health. Because dust is so fine, it's important to use a high efficiency vacuum that contains particles.

Vacuuming is the quickest, most efficient and cost effective method for surface prep and post-installation clean up. Whether installing drywall, sub-flooring, hardwood, tile or stone, it's important to completely remove all dust and debris for a clean finish.

Construction cleanup prices range from \$0.10 to \$0.50 per square foot.

Cleaning for Health® & ProLevel Filtration® System

The unique ProTeam method of suction-vacuuming cleans carpets, hard floors, and other surfaces without stirring up dust – so the environment stays cleaner and more particulate is captured, contained, and removed.

- **CLEAN CARPET & HARD SURFACES** without stirring up dust.
- **ENVIRONMENT STAYS CLEANER**, reducing the need to dust as often.
- **VACUUMS DESIGNED TO IMPROVE** indoor air quality.
- **LOW DECIBEL LEVELS REDUCE** noise pollution.

1) Inner Filter Intercept Micro® Filter

2) Outer Filter Micro Cloth Filter

3) Dome Filter Plastic cage with Foam Filter Media

4) HEPA Media Filter Reduces emissions

Where ProTeam vacuums can help

DRYWALL:

Sanding is an essential but messy part of drywall installation, and it can be dangerous to inhale fine dust particles in the air. After sanding, be sure to completely vacuum to ensure there is a clean surface to continue with installation.

TILE & LAMINATE:

Always make sure all surfaces are clean before installation so that dirt doesn't contaminate thin-set, preventing tiles from adhering to surfaces properly. Vacuuming is always the best application for making sure dirt is eliminated.

FLOORING:

ProTeam vacuums attach to floor sanders and capture fine dust before it re-enters the environment. Vacuuming for constant cleaning throughout the floor finishing process – during and after sanding, between finishes – creates a high quality finish.

The right tool for the right job

Multiple uses for many applications

Ideal to achieve the perfect finish for pre & post construction jobs.

Carpets and subfloors

Ideal for quickly drying out large or hard-to-reach areas.

Jobsite cleanup

Ideal for capturing and containing dirt and debris for pre- or post-installation clean up.

Large debris pickup

Ideal for quick pickup of large or debris throughout the jobsite.

A vast array to meet your needs

#100110 Dust Brush

#100108 Crevice Tool

#106194 14" Hard Surface Floor Tool with Scalloped & Flat Felt Brush

#100614 Horse Hair Brush Floor Tool

#100150 36" One-Bend Bulk Pickup Tool

ProTeam advantages Five steps to success

- 1 EFFECTIVE**
High-powered suction & ProLevel Filtration remove more than 99% of dust up to 1 micron for a clean working space.
- 2 ERGONOMIC**
ProTeam lightweight vacuums evenly distribute weight, reducing stress & fatigue.
- 3 DURABILITY**
A ProTeam vacuum has an average life of 7 years with a multi-year warranty to back it up.
- 4 PERFORMANCE**
Most ProTeam products carry an unmatched 3-year parts, labor & motor warranty.
- 5 VERSATILE**
Whether you install drywall, floors, or perform various project work, ProTeam versatile tool kits meet any need.

Dyna Contracting uses ProTeam to get a deep clean with a light touch

Cleaning a building regularly and thoroughly is just as important during its construction as it is after its completion. Just ask Gus Poole, the Project Manager for Dyna Contracting in Seattle, Washington.

“A clean site is an efficient site,” says Poole.

“We’re a full-service construction company specializing in high-end remodels and new construction,” says Poole. “Anytime we finish a project—a new floor, new tile, new counter tops— there’s still work to be done. We have to clean it really well before we do property-protection.”

A Clean Finish

“Property protection” means putting down a protective layer—ram board or paper—over the newly installed surfaces so the restoration process can continue. Maintaining a cleaning regimen both before and after this phase keeps the carefully crafted work looking pristine.

“If we keep the site clean, we’re not doing damage to our finished surfaces. So we use ProTeam vacuums to keep it clean on a daily basis. Our ProTeam vacuums get the grit up without kicking it back into the air the way sweeping does.”

The Pluses of Portability

“It really just comes back to portability,” Poole observes. “The backpack vacuum has such a great way of going all over the room. Typically, you might use a commercial-grade shop vacuum. They don’t compare to a ProTeam. They’re just less mobile. We can set up a backpack vacuum on a long extension cord and hit five or six rooms. It’s easier to move around without bumping into things.”

And with ProTeam, portability goes hand in hand with versatility.

A Deep Clean, A Light Touch

For the final clean, a ProTeam backpack vacuum is the obvious choice.

“At that point, you really don’t want to be dragging a shop vacuum around; that would damage the surfaces.”

And ProTeam’s versatile attachments ensure the surfaces remain flawless.

“We like to use the wide Horse Hair Floor Tool Brush. It gets into the hardwood floors. We’re trying to be delicate, using the gentlest methods, waiting until the hardwood floor surfaces are firmed up. The last thing that we install is the carpet. When you install a carpet there’s a ton of carpet debris. A once-over with the ProTeam takes care of that.”
